

Drivechain

An Interoperability Layer-2

Described in Terms of the LN – something you already understand

Paul Sztorc

Research Director, Tierion

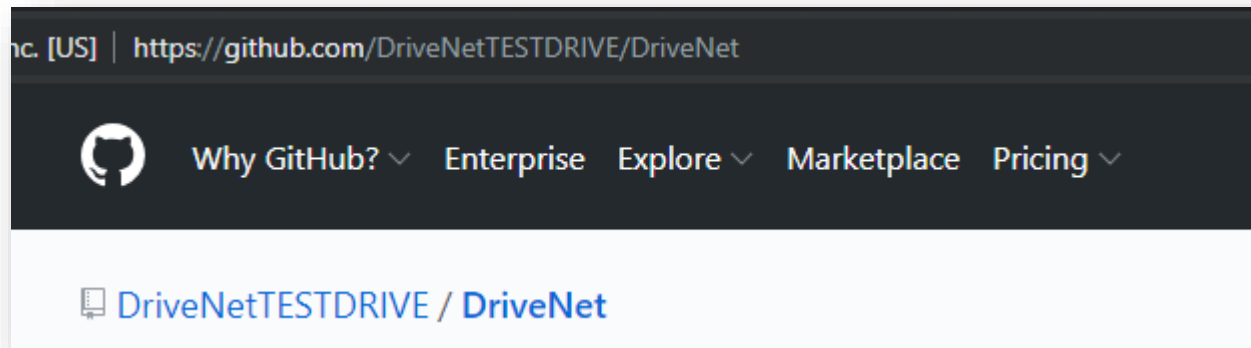

May 27th, 2019

About Me

- 2012 -- Bitcoiner
- 2014 -- Truthcoin.info Blog
- 2015-Present – Scaling Bitcoin 1,2,3,4; TabConf and BoB
- Currently: Research Director at Tierion
- Previously: Statistician at Yale Econ Department

Topic: Drivechain

- A Bitcoin Layer-2 (... or, a “Layer 1.5”)
- Interoperability AND Scaling
- Soft Fork -- BIPs 300 and 301
#642 #643
- www.drivechain.info

GitHub

Original Nov 2015 Post

In One Slide

Problem	Meta-Consensus (Altcoins, Hard Forks, and Contentious Features)
Solution	Interoperability (One Token, traveling among many blockchains)
Goal	Don't compete to win -- instead just play all the hands (so you can't lose).

Interoperability

- Teamwork + Differences = Interoperability
- “Team” Agrees on bare minimum – otherwise free to disagree

Interoperability

- Teamwork + Differences = Interoperability
- “Team” Agrees on bare minimum – otherwise free to disagree
- In DC: Agree on **total coins** and **their location among blockchains**.

Coin Locations		
	BTC	% Total
Bitcoin Core	10,250,983	61.5%
Bit-Ethereum	551,675	3.3%
Bit-Monero	674,370	4.0%
Bitcoin Unlimited	1,650,202	9.9%
Bitcoin 25X	1,497,040	9.0%
Bit-Mimble	1,984,302	11.9%
...	42,897	0.3%
Bit-DAO	16,501	0.1%
Bit-TEZOR	740	0.0%
Bit-StupidProject	1,239	0.0%
Bit-Whatever	51	0.0%
Subtotal	16,670,000	100.0%
<i>Not-Yet-Mined</i>	<i>4,330,000</i>	
Grand Total	21,000,000	

How Drivechain Works

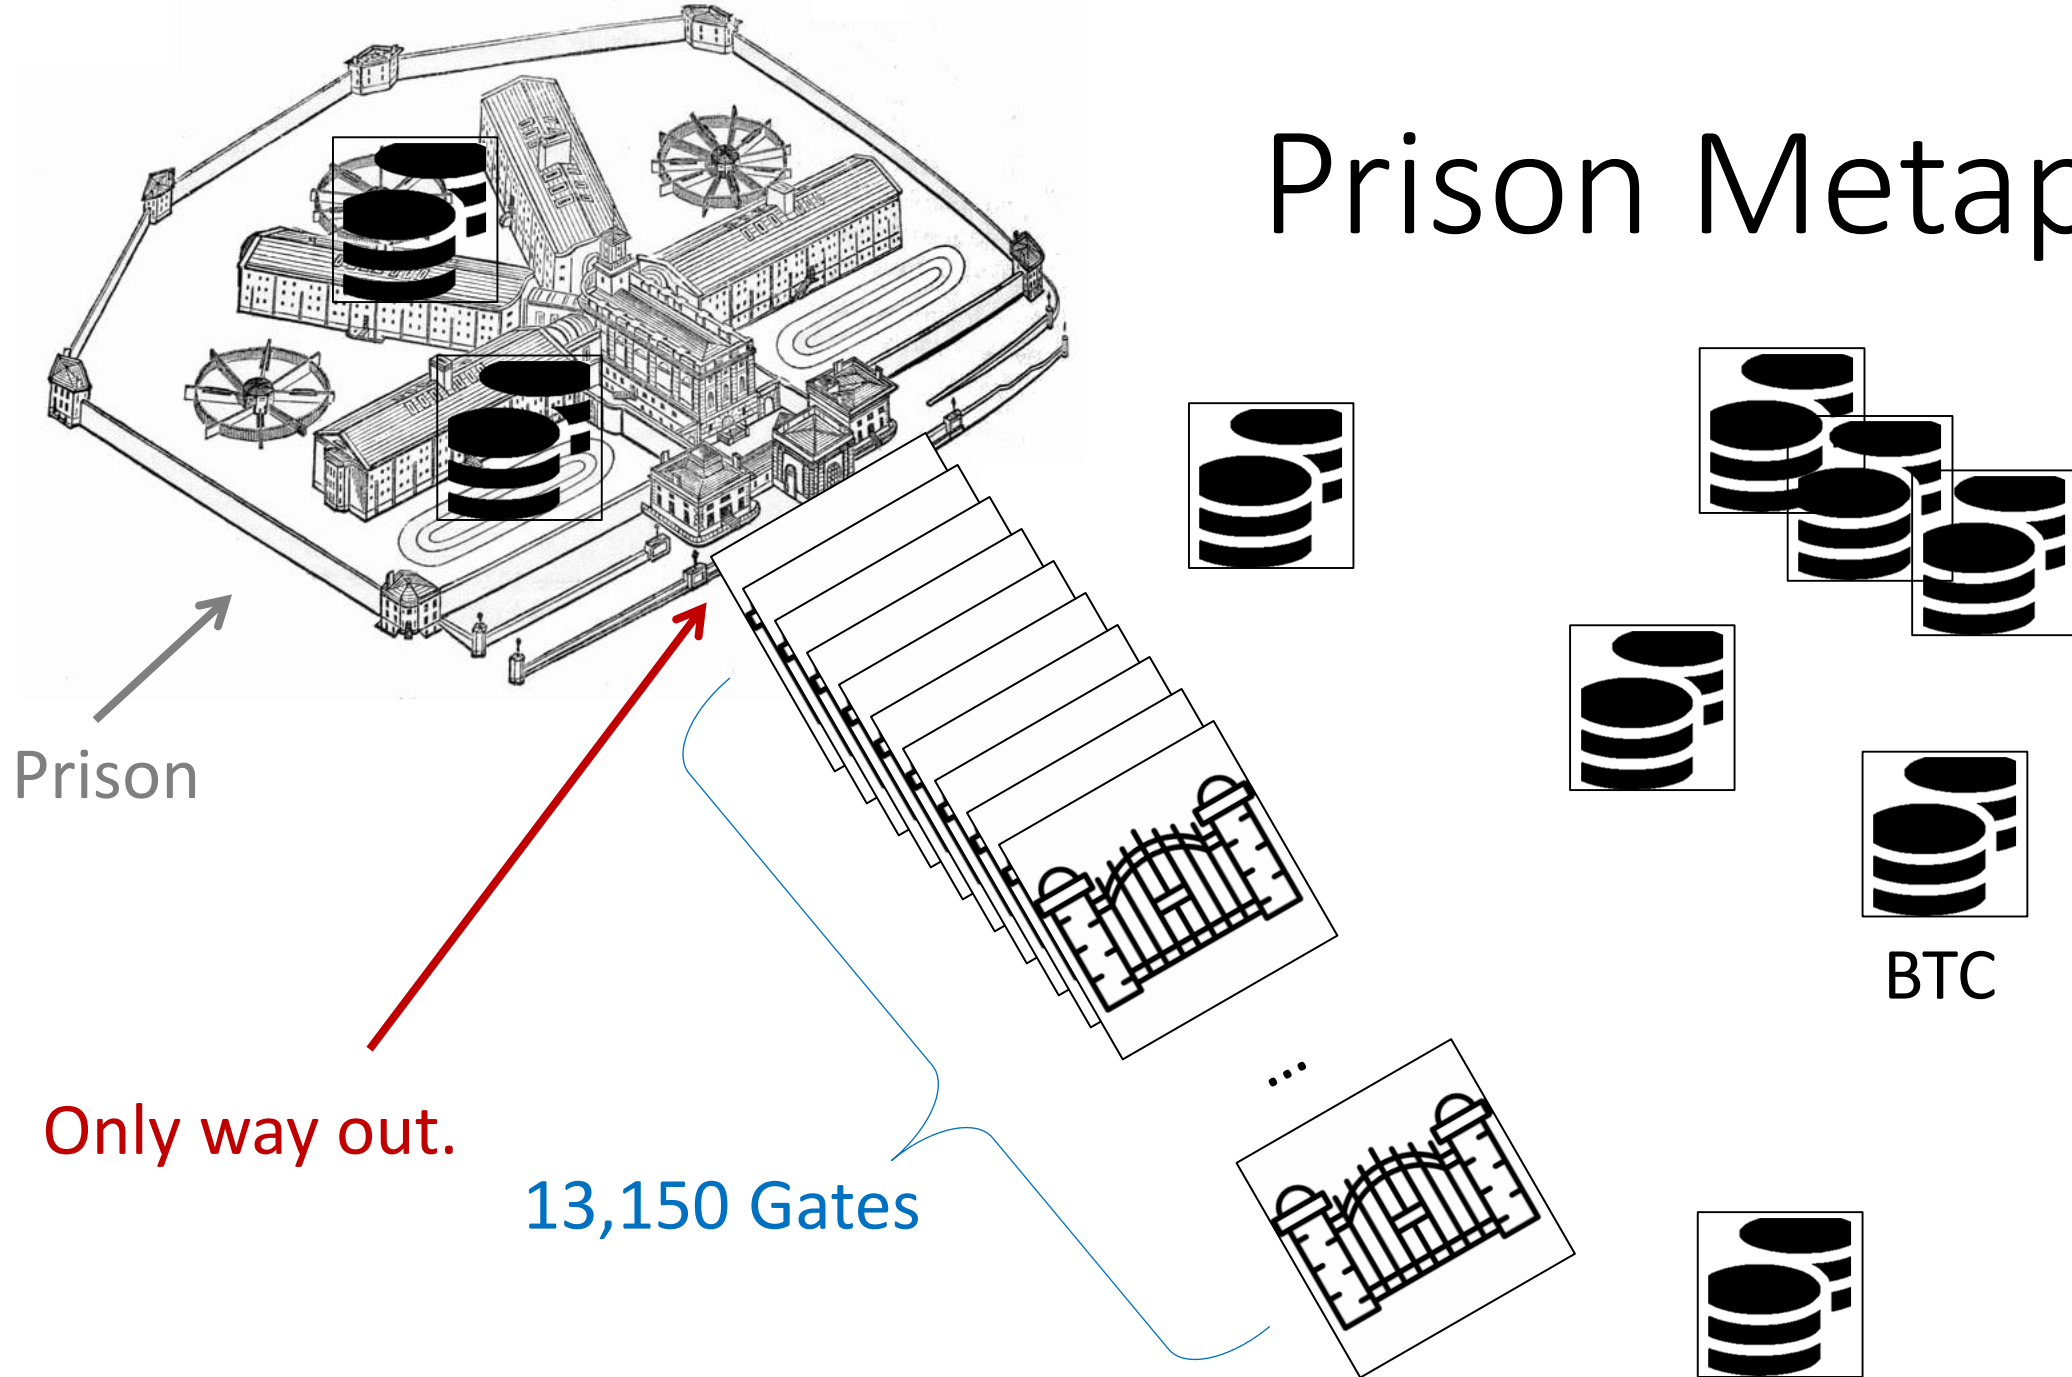

- New Kind of Output: “Hashrate Escrow”
- Anyone can deposit to it at any time.
- But withdrawals are very slow.

Series of gates.

Prison Metaphor

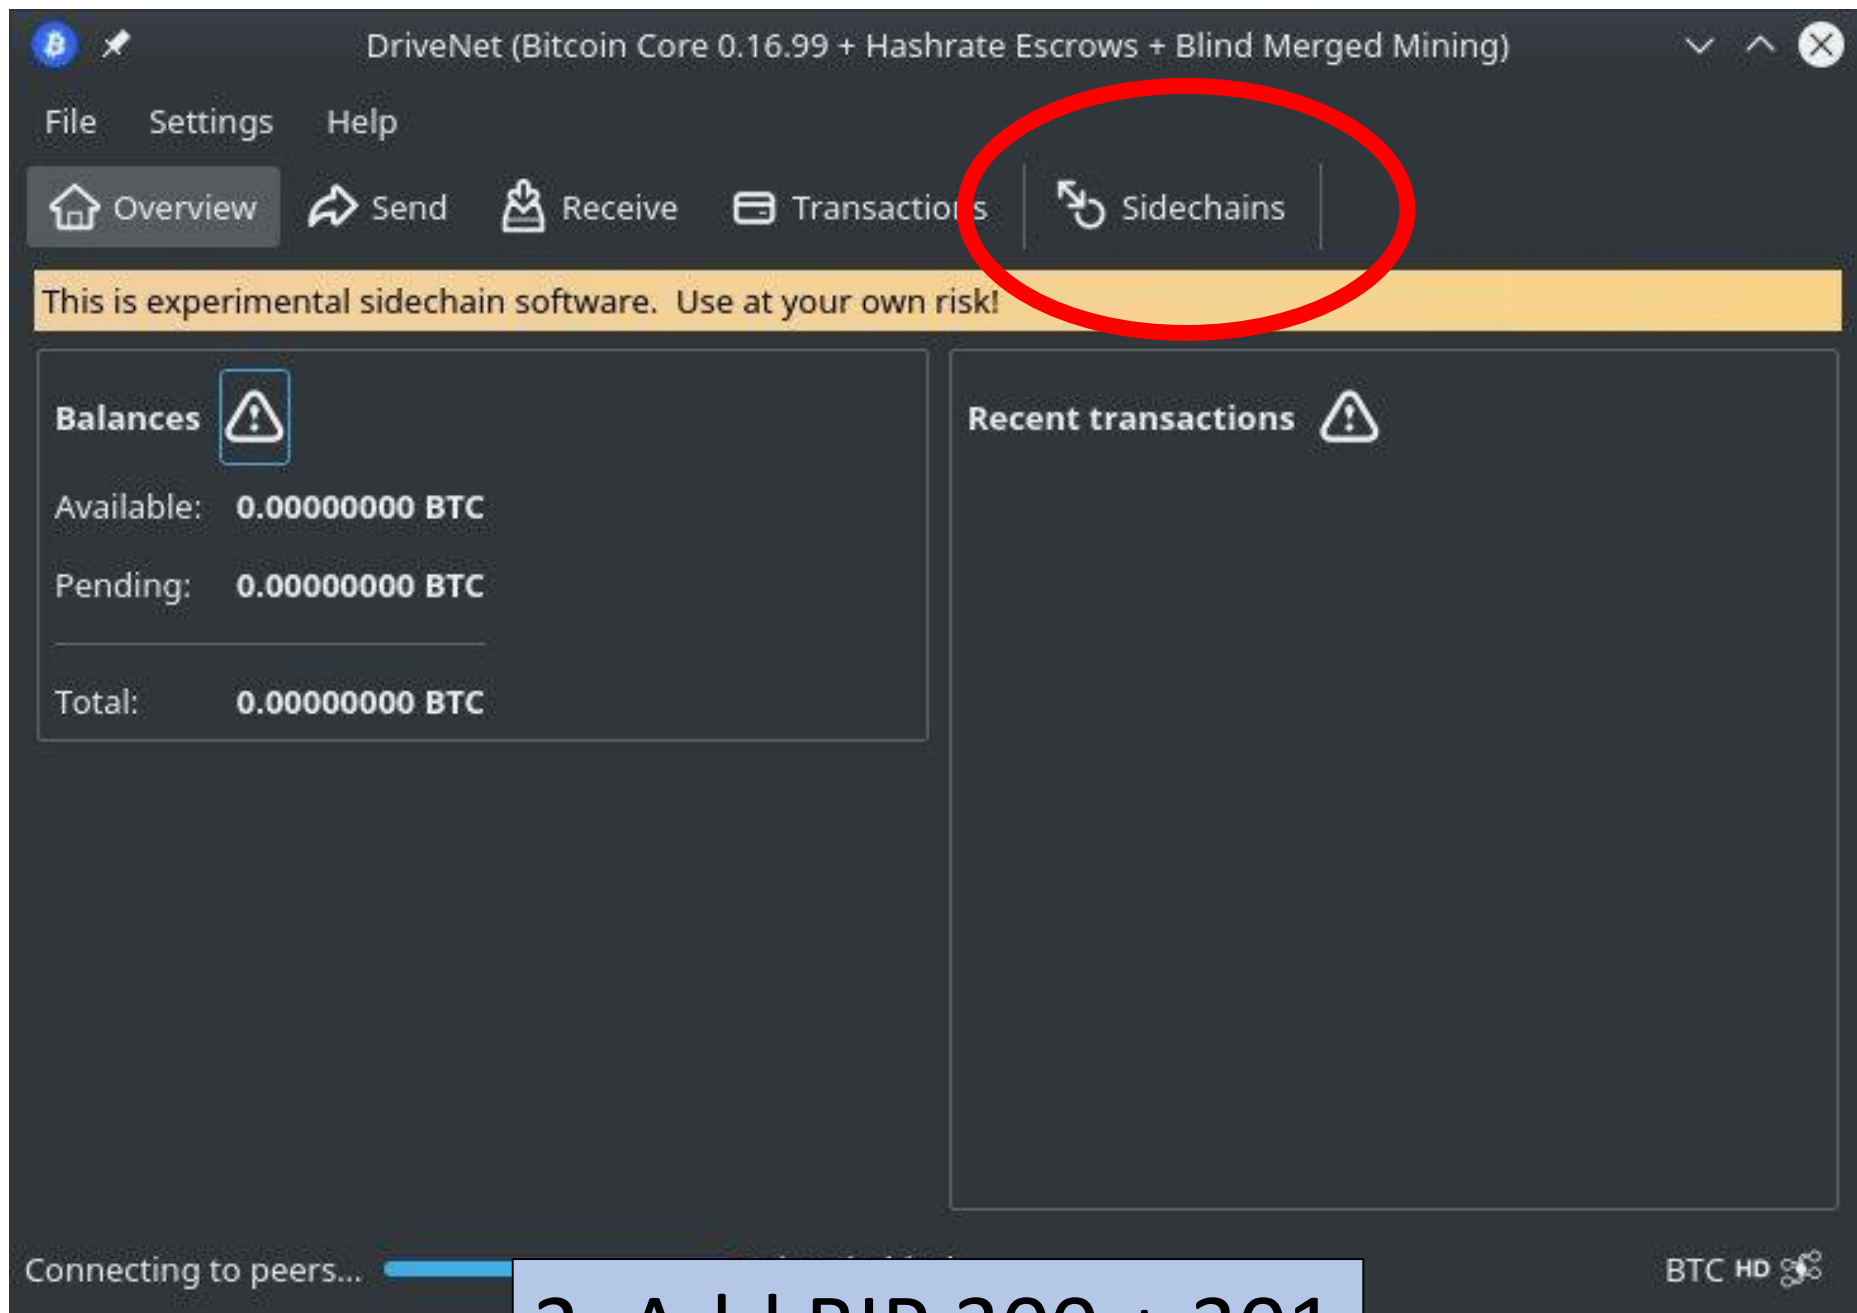

Example

A “Payments Sidechain”
Similar to Lightning

Example

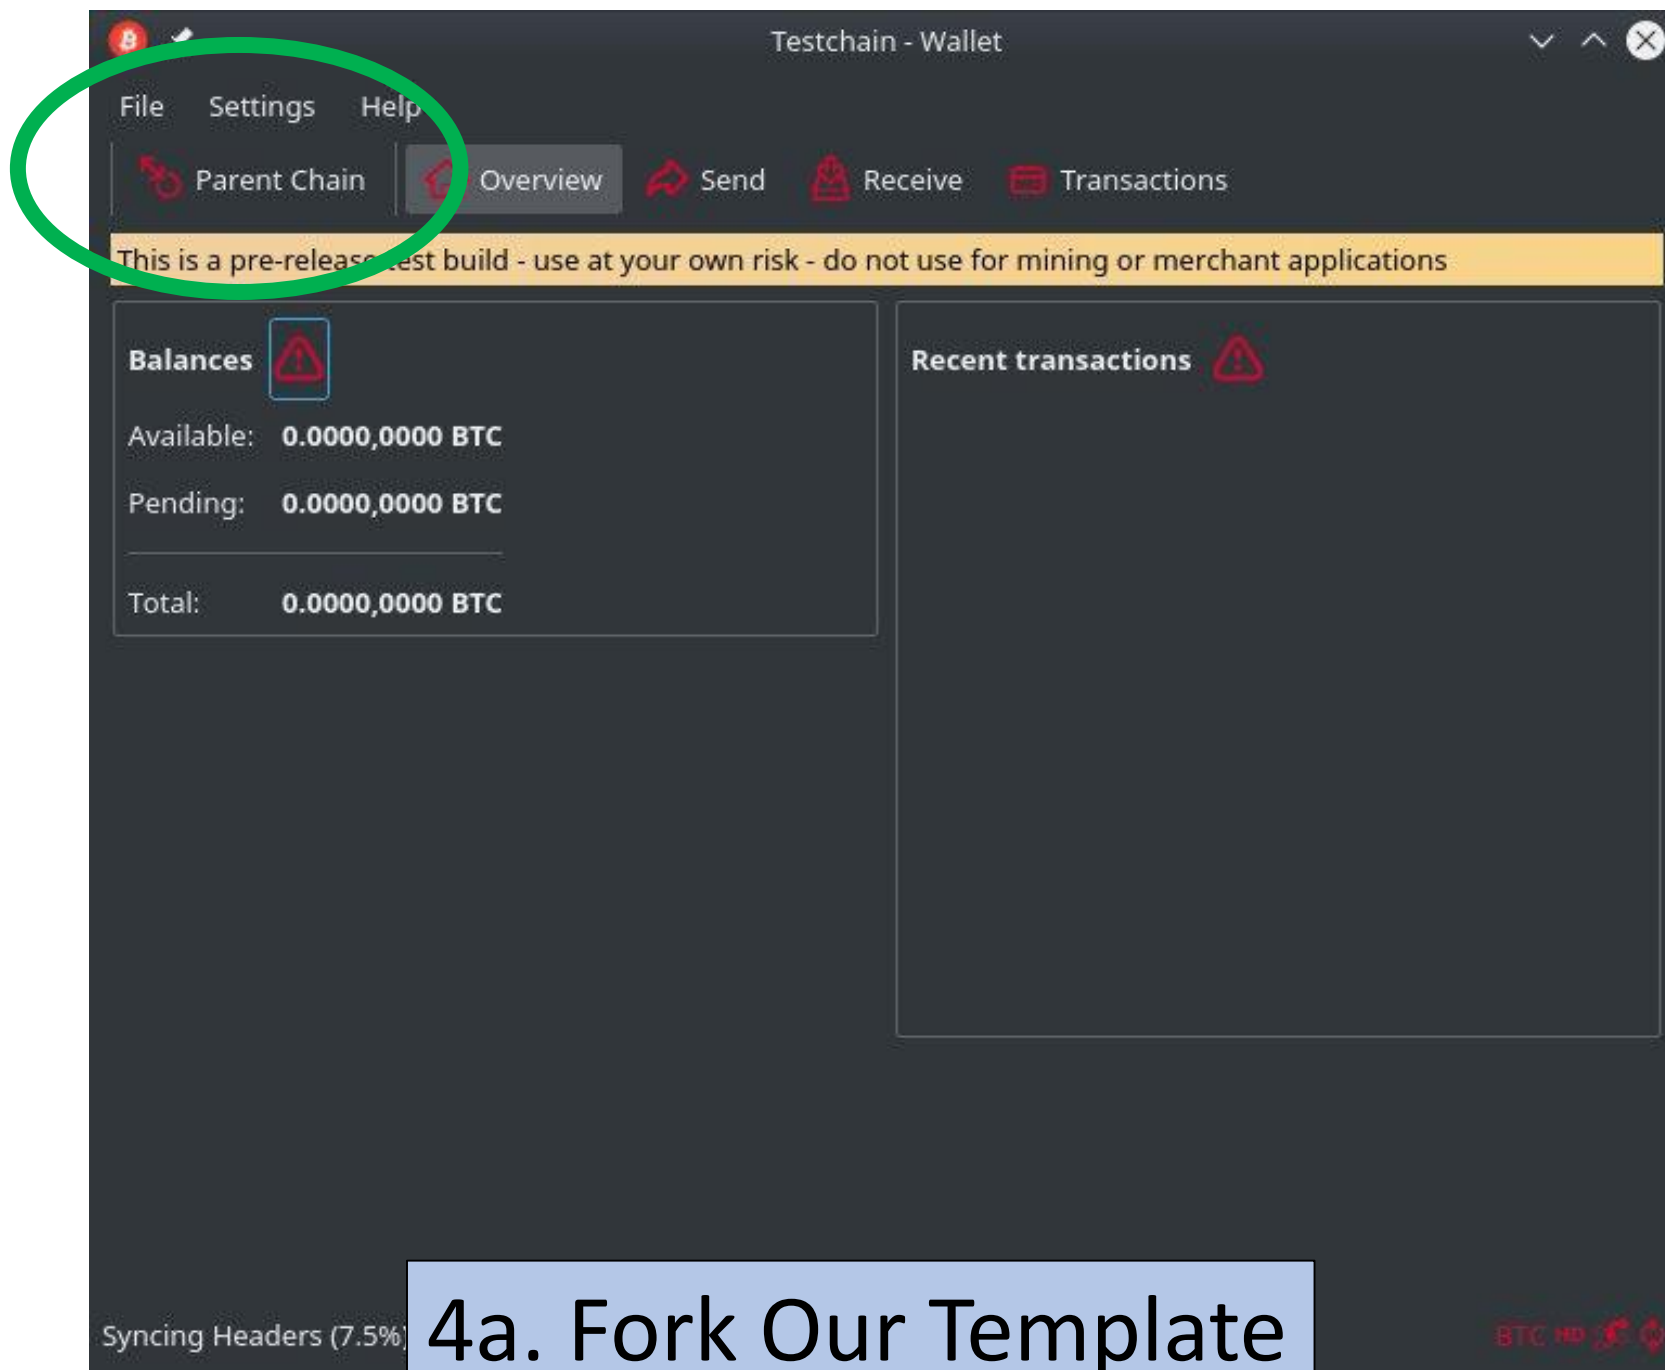

1. Start with Bitcoin Core

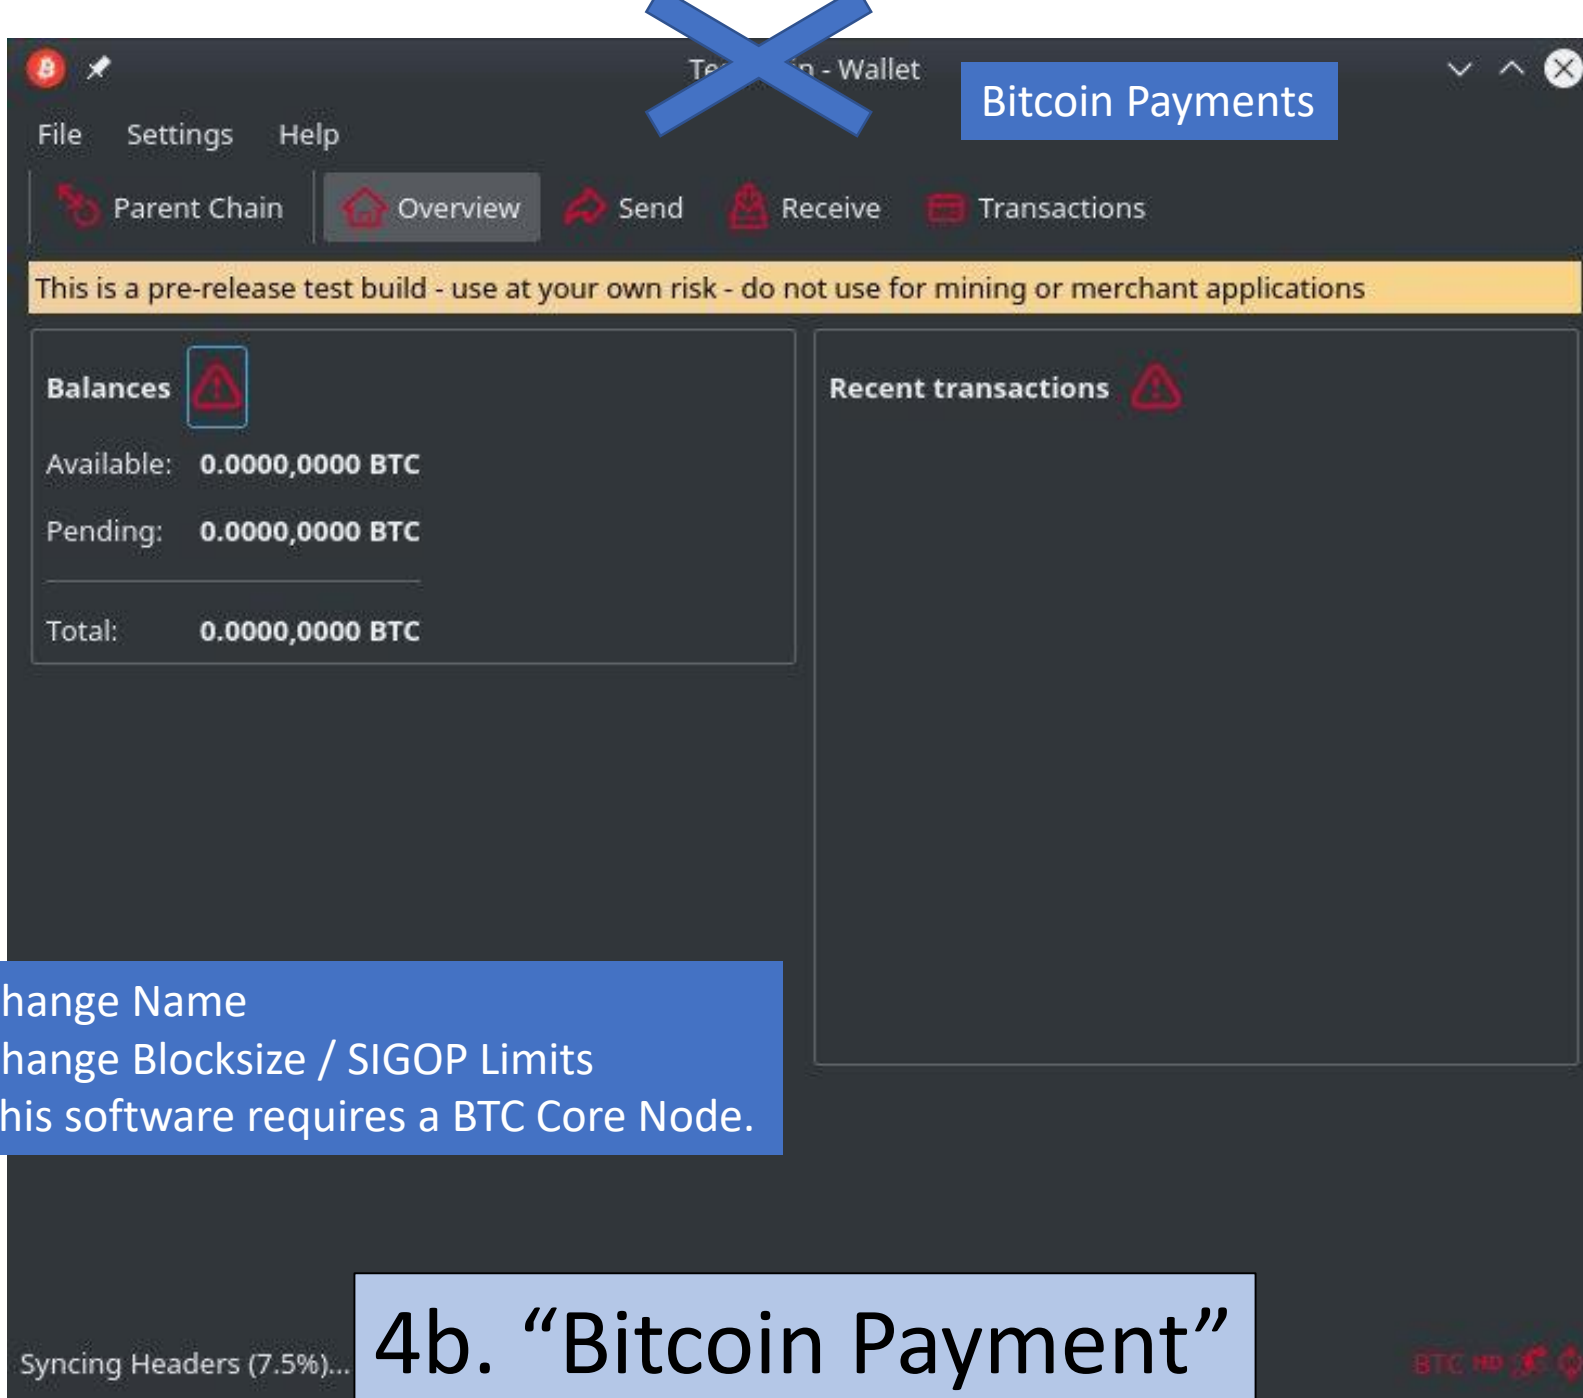

2. Add BIP 300 + 301

3. Meta-Consensus Problem

- Change Name
- Change Blocksize / SIGOP Limits
- This software requires a BTC Core Node.

4b. "Bitcoin Payment"

“Bitcoin Payments”

Now Open For Business

5. Add New Escrow

Sidechain management (for miners)

Propose Sidechain

ACK Sidechain(s)

Configuration File(s)

Upper Layers = Different Threat Models

Upper Layer:	Lightning Network	Hashrate Escrow
New Security Considerations	<ul style="list-style-type: none">• Notice fraud in time.• Emergency Broadcast to Layer-1• Shrug off custodial period.	<p>Are these escrows making miners wealthier?</p> <p>Are they <u>popular</u>?</p>

Miner Theft

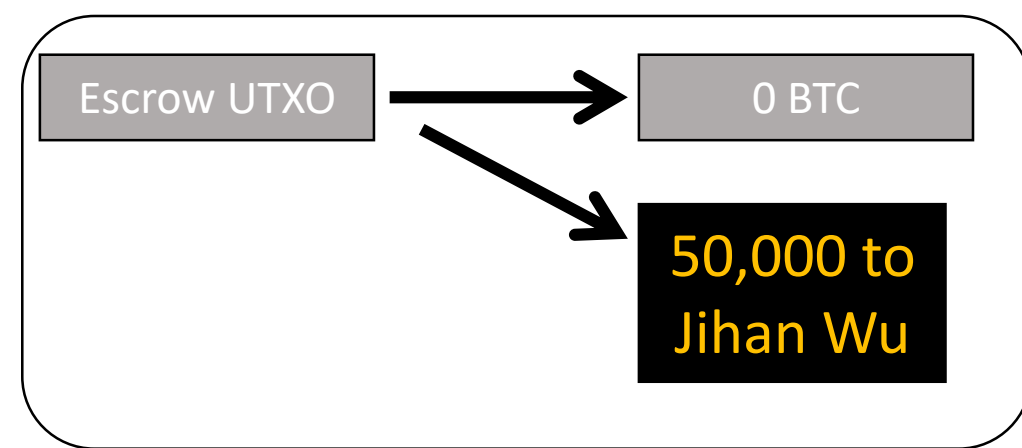

3 Awkward Months...

12. Making Progress...

On layer-1:

13. Withdrawal Complete

32 bytes

Summary

1. New source of miner-profits.
2. Miners choice: claim this revenue, or destroy it.
3. High-Auditability:
 - a) Reducing “all txns” down to “net transfers”.
 - b) Crunching all xfers down to 32 bytes.
 - c) One transfer at a time.
 - d) Transfers take 3 months to settle.

- Txn Fees
- Token Value

Good News: 100% Optional

- Layer-1 Full nodes: track coins as they enter/exit prisons.
- “Vanilla” Layer-1 contains everything that is needed...
 - ...to validate Drivechain txns.
 - ...to maximize mining-revenues.

Retail Payments – Comparing the Process

1) Onboard; 2) Make n payments; 3) Settle

You know it. You love it.

Aka “Largeblock Sidechain”
(a **hashrate escrow**; a **prison**)

	Lightning Network	“Bitcoin Payments”
Extra Software	LN Node	SC Node (SPV option)
Onboard a User	Layer-1 txn	Layer-1.5 txn
Preparation	1 channel-open txn	--
N Payments	..on LN	..on L-1.5
Settle to Layer-1	1 channel-close txn	1 “sideshift” out

Total Transaction Fees

	L.N.	B.P.
%-based (LN or SS)	n	1
Layer-1 (larger)	3	1
Layer-1.5 (smaller)	0	n

So, LN is only cheaper when there are many low-value payments. I.e, LN is cheaper than BP, for **micropayments**.

User Experience

If you are willing to swallow the new security consideration...

* I assume that an automated hot-wallet is out of the question!

	Lightning N.	BTC Payment
Onboard without Layer-1	No	Yes
Receive Payments while Offline*	No	Yes
Recover Wallet From Seed	No	Yes
Immune to Greif-ing / Routing	No	Yes
Option to use SPV Mode	No	Yes
Reckless	Yes	Yes
Txn Settles Instantly	Yes	No

...then we see that the primary advantage of LN is **fast settlement**, especially when both buyer and seller are online. So, LN probably best for in-person retail; SC better for online shopping, perhaps.

Goals

1. Neutralize Meta-Consensus Threats – Altcoins, Hard Forks
2. Boost Hashrate Security In the Long Run
3. Bring Cool New Features to BTC
 1. Payments Sidechain (Just Explained)
 2. New, Risky Crypto (Liquid / MimbleWimble / zCash)
 3. BitAssets (see truthcoin.info/blog/BitAssets)
 4. Identity (see truthcoin.info/blog/codex-identity-sidechain)
 5. Prediction Markets (BitcoinHivemind.com)

Hivemind Endorsements

(short) talks:
BitcoinHivemind.com

Endorsements

“Hivemind may be the most important invention since Bitcoin itself.”

- **Roger Ver** (Jun 2015), Bitcoin evangelist and seed investor (Blockchain.info, [The Bitcoin Foundation](http://TheBitcoinFoundation.org), [Ripple](http://Ripple.com), [BitPay](http://BitPay.com), [ShapeShift](http://ShapeShift.io), Purse.io)

“I’d give it a low **chance of success**, but at least it’s clever crazy rather than stupid crazy. :)”

- **Peter Todd** (Oct 2015), Bitcoin core developer, notable skeptic ([Coinkite](http://Coinkite.com) “Chief Naysayer”), inventor of [Treechains](http://Treechains.com)

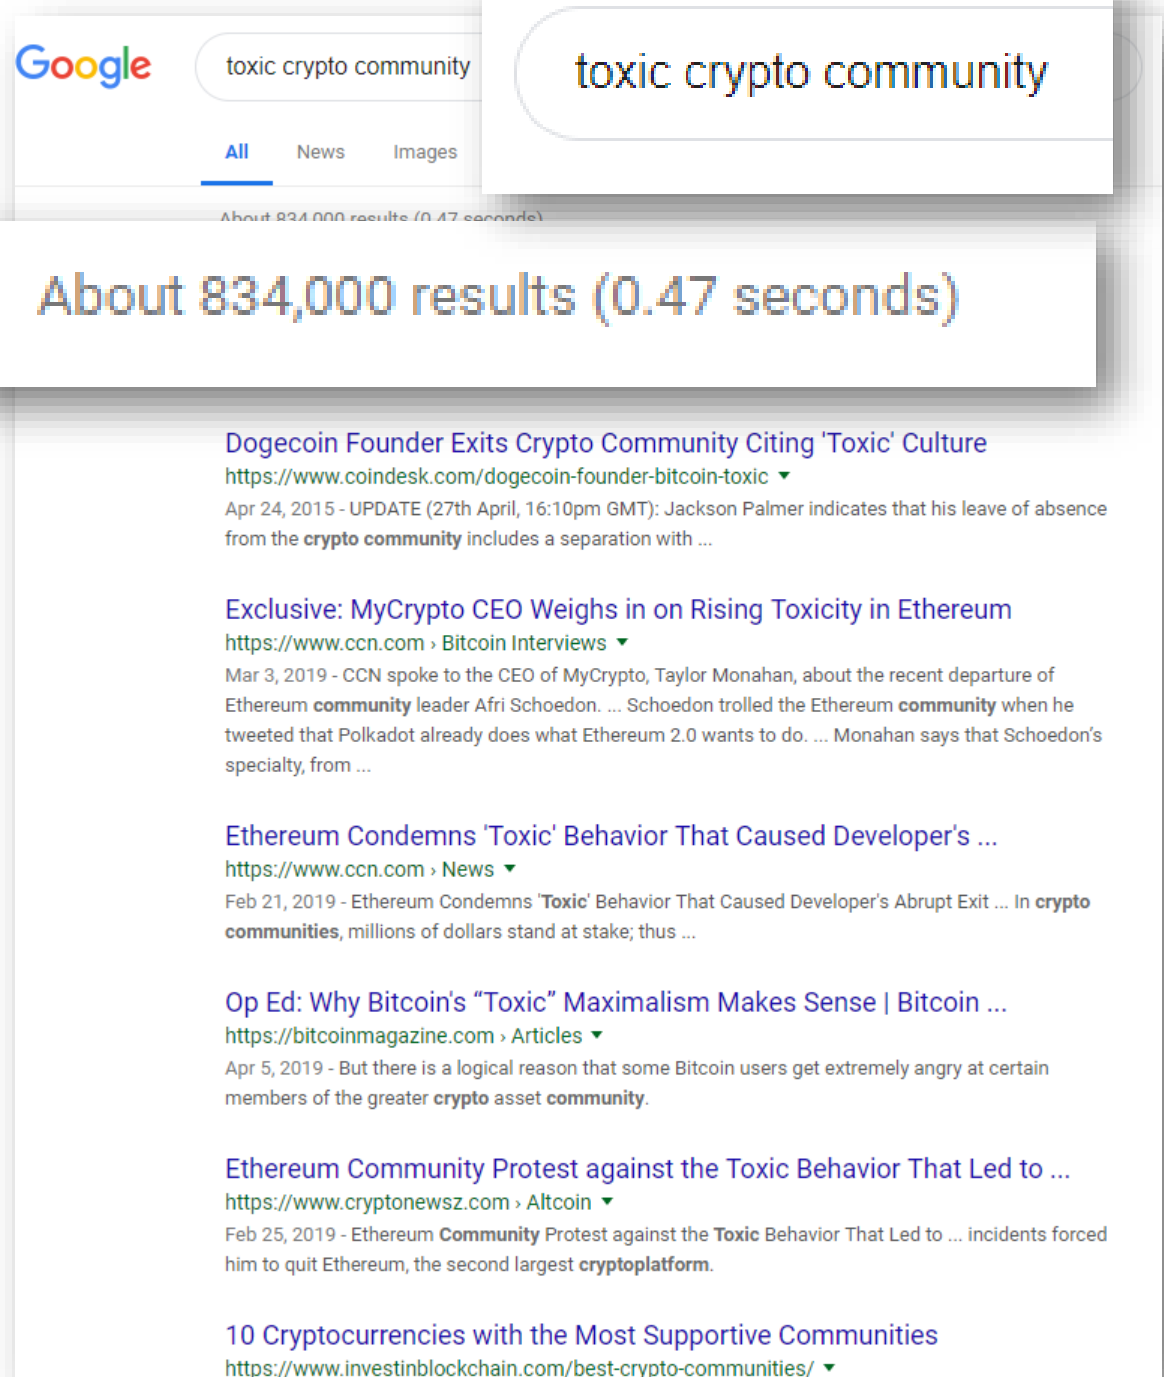

“Hivemind is a real project with interesting use cases. It’s great to see them using sidechains - anyone with Bitcoin can participate in their markets.”

- **Dr. Adam Back** (Dec 2015), [Notable Cypherpunk](http://NotableCypherpunk.com), inventor of [Hashcash Proof-of-Work](http://Hashcash.org), [Blockstream](http://Blockstream.com) Co-Founder and President

“I’m very optimistic about the feasibility of this project.”

- **Andrew Poelstra** (May 2015), author of [A Treatise on Altcoins](http://ATreatiseOnAltcoins.com), [On Stake](http://OnStake.com) and [Consensus](http://Consensus.com), co-author of [the Sidechains Whitepaper](http://theSidechainsWhitepaper.com)

Money, blockchains, and social scalability

Interoperability – Adding OP Codes

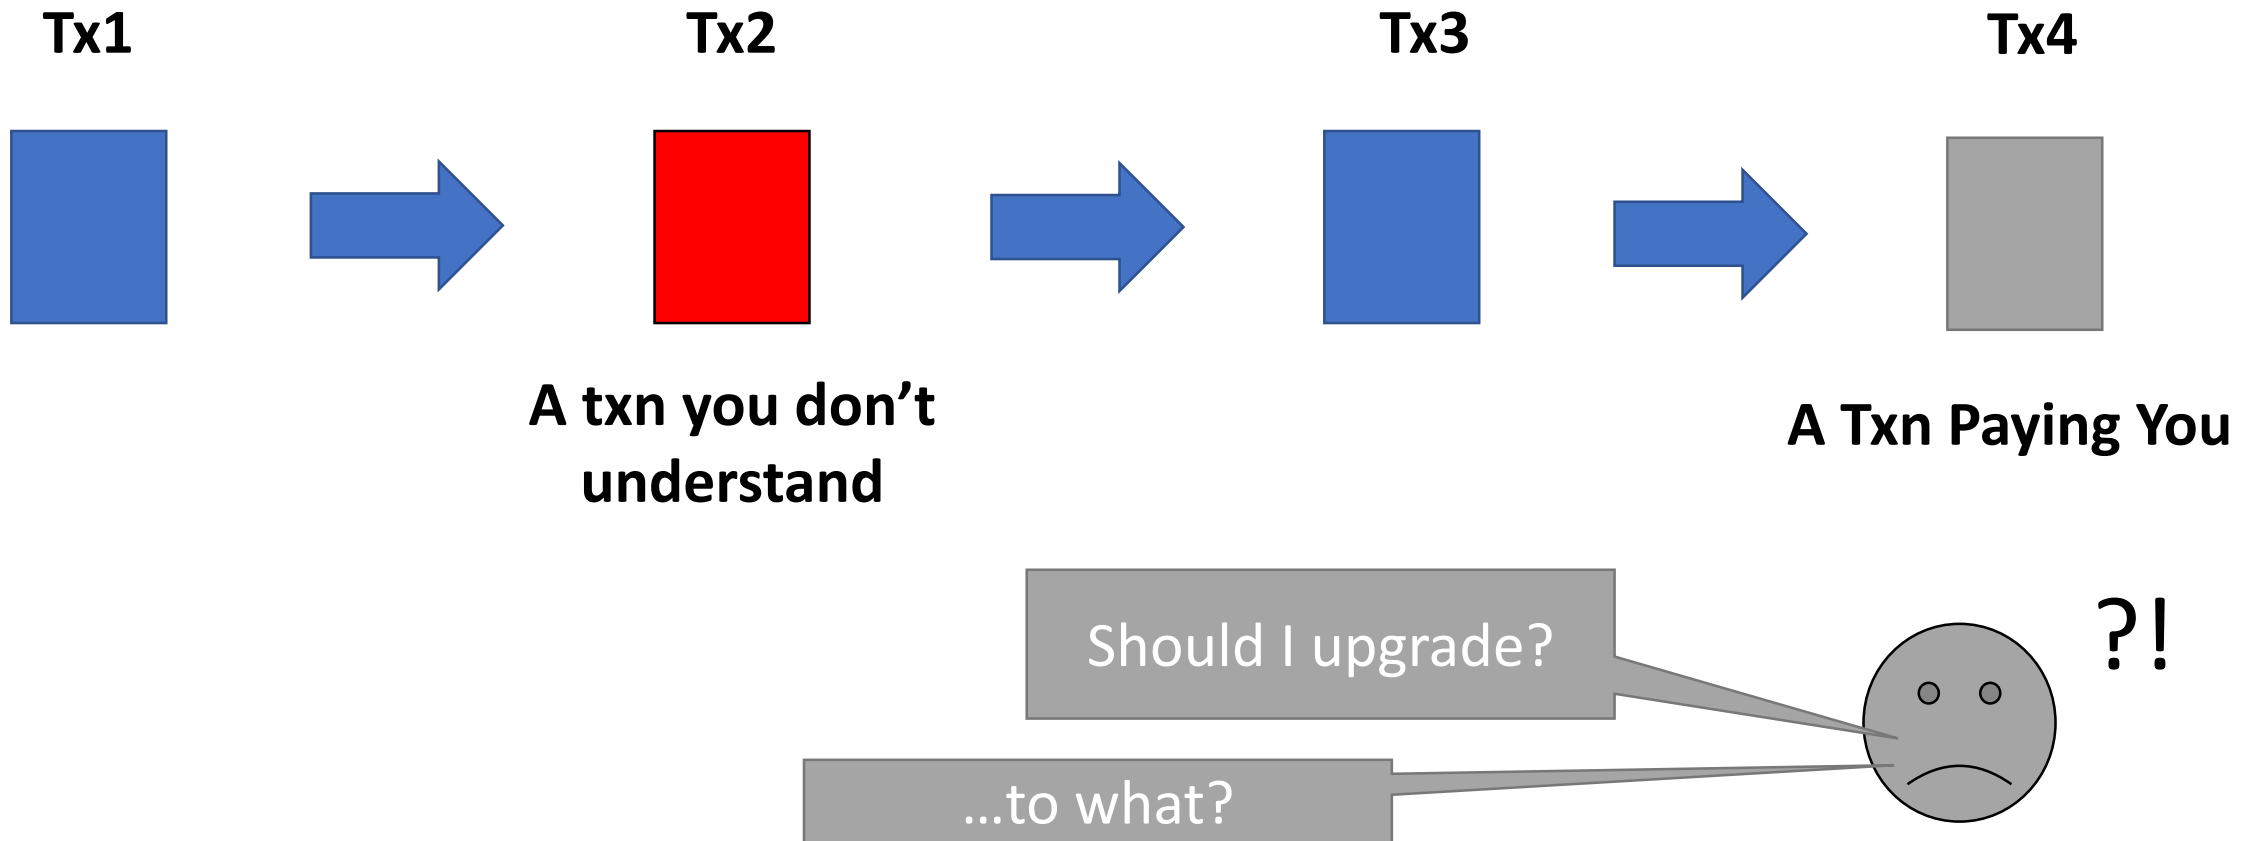

Interoperability – Adding OP Codes

Soft Fork Ensures Interoperability:

- Blocks – If one Node accepts a block, we know that all nodes will accept.
- UTXOs – All Nodes have the exact same UTXO set, at all times.

“Soft” Coercion

A photograph of a prison yard. In the foreground, there are two large, open metal gates made of chain-link fencing. Beyond the gates is a paved walkway that leads into the distance. On either side of the walkway are high, grey concrete walls topped with multiple layers of coiled barbed wire. In the background, there are more prison buildings and a glimpse of a hillside under a clear sky. The overall tone is somber and institutional.

Thank You
